If this could be used in tandem with VR related stuff then that would be awesome. Also, even though the basic stuff is translated, I couldn't figure out if there was an overall translation. The tutorial (i think that's what it was) was in Japanese so I was stuck and had to free ball it.

Other than that, this product is fun and I look forward to seeing what else comes out of it!

*Edit: I haven't tried yet, but if this app could be linked with Discord or something, that would be kind of cool.
